## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 7 is rejected under 35 U.S.C. 102(b) as being anticipated by Fairbanks (newly cited).

Fairbanks discloses an airbag 10 in Figure 1 with an upper portion or upper half in Figure 1 having an upper rear surface which cushions generally against the face of the occupant 12 as the airbag is inflated as functionally recited (see bag 10 in Figure 2) and a lower bag portion or half forming a lower rear surface and joined with the upper portion (i.e., at line 44 in Figure 7, as the sheet forming the bag is integral, and along the straight sides between points 104 and 108, 106 and 110, etc.) to form the airbag. As seen in Figure 1, the lower rear surface extends rearwardly of the upper rear surface to cushion against the abdomen as functionally recited. As seen in Figure 7, the left and right ends of rear upper and lower surfaces are joined to left and right side portions by joining lines having arc shape portions of different radii continuously joined so that the joining lines are smoothly curved (i.e., between points 50 and 66, 52 and 72, 54 and 104, 56 and 106; between each set of points listed is a line more sharply curved in one section and transitioning into a gradually curved area, so that whichever side of the sheet in Figure 7 is the rear lower portion would be joined to a side portion by a line having different

continuous radii). As noted above, in Figure 1 the lower face portion of the bag approaches the occupant's abdomen.
